

PROJECT PROPOSAL

Presented by:
Arthur Romary,
Sofiya Savarovska
and Solène Jobert

OVERVIEW

01

Process
overview

02

Core
structure

03

Necessary
concepts and
requirements

04

Arising choices

05

Additional
ideas

01

PROCESS OVERVIEW

DECONSTRUCTION OF TASKS

- Thorough reading, and common terms definitions
- Basic requirements discussion
- Examples and scenarios
- Edge-cases
- Definition of global structure

AI SUPPORT

- Decomposition guidelines
- Basic requirements comparison
- Basic scenarios
- Possible new edge-cases

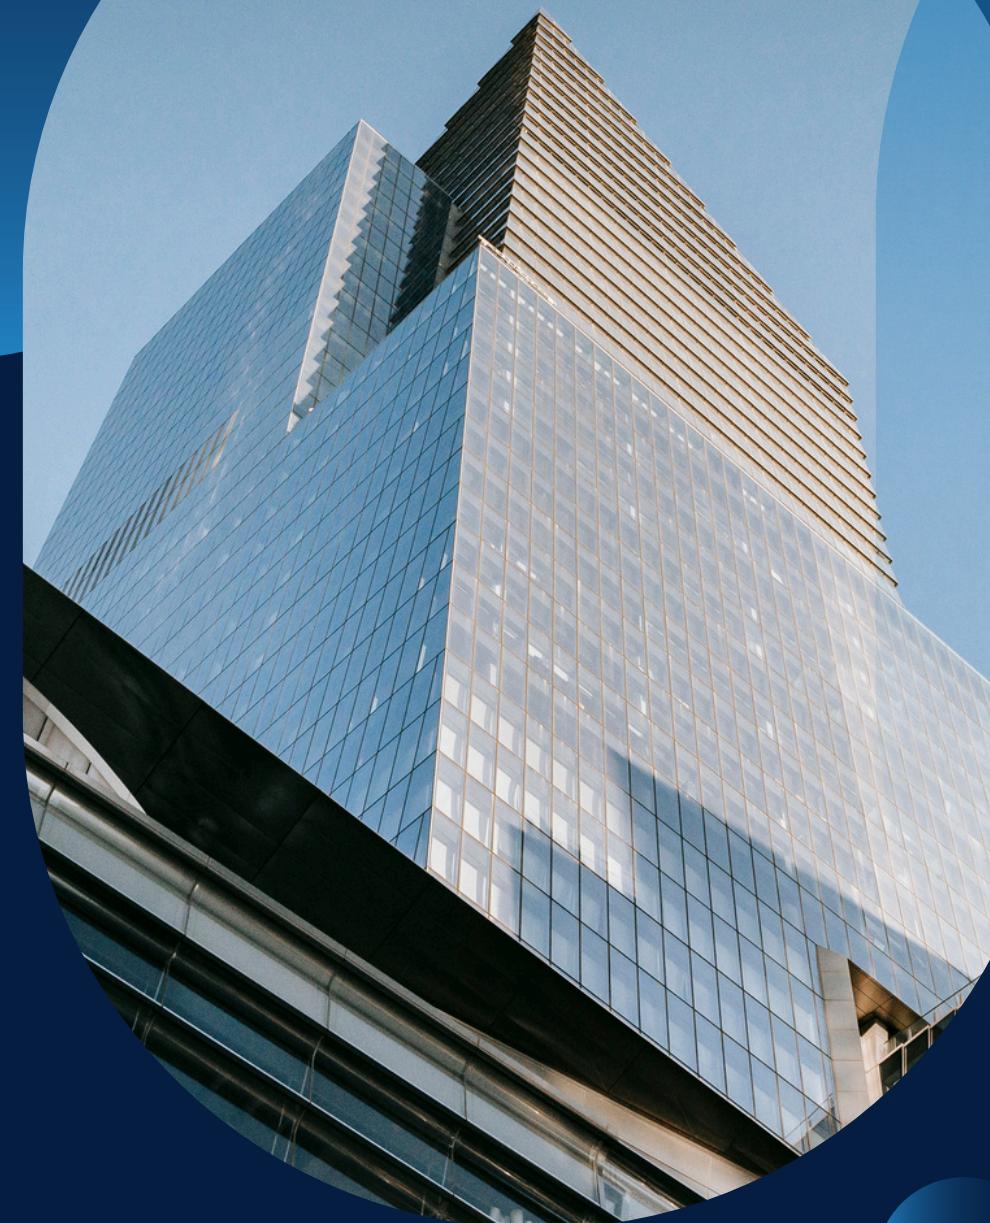

02 CORE STRUCTURE

01

What is a task ? Multi-levels and organisation

02

What are various Views and environment of the App ?

03 NECESSARY CONCEPTS AND REQUIREMENTS

► CATEGORIES

Flexible and easily moveable task structure, with 1-2 level sub-tasks.

► ATTACHEMENTS

Free listing of sub-tasks, links and file attachemens management, flexible date attachement, points and urgency

► LOGGING

For easier management and control, active and intensive logging of modifications, deadlines, points, mainly for statistics and notifications

► NOTIFICATIONS

Configurable notification timer, flexible and non flexible hours, management of cyclic tasks, deadline tracking

► DISPLAYED VIEWS

Main task views and indexations, deleted/finished tasks, gamification statistics, settings, task creation

04

ARISING CHOICES

- ▶ **GRAVEYARD**
Displaying “en vrac” all the finished and possibly deleted deadlines, with tags and identifiers for them to be findable
- ▶ **ADVANCED SETTINGS**
Necessity of configuration and preconfiguraiton for urgency, notification timers, fast deadlines, gamifications points
Deactivating various services of the app.
- ▶ **TAGS**
Tags and pointers for more flexible task arrangement and search : tags for status; possible multiple subjects
- ▶ **PRE-CONFIGURATION**
Offering pre-configuration at the start of the app, to better suit users desire with the service.

05

ADDITIONAL IDEAS

THEME AND DISPOSITION

Customizable themes, widgets, AI-assisted illustrations

ACCESSABILITY

Support for colorblinds, AI-assisted description of app (reading)

SPECIALIZED FIELD

Possibly enhancing support for programmers via GitHub project support and linking (deadlines, points, issues), or focus on gaming driven usage of the app.

THANK YOU
